SLIDING DOOR OR WINDOW WITH BATTERY-POWERED VENETIAN BLIND (SMART W SYSTEM)

## Sunshades for your family's wellbeing

ScreenLine® insulated glazing blinds, with shading solutions combining modern design and groundbreaking technology for an unrivalled experience will transform your home into a comfortable and practical environment.

Besides blending various shading solutions (venetian blind, roller, plissé and blackout plissé) and movement systems (manual and motor-driven), ScreenLine comes with blind insulation solutions between two glass panes offering several benefits (e.g. no cleaning and maintenance). This makes it the ideal solution for all homes...or rather, for all rooms!

## 8 reasons to choose ScreenLine

### **Solar protection**

Direct glaring in your home? Overheated rooms? Disturbing reflections on computer or television? Besides offering effective protection from direct solar radiation, ScreenLine insulated glazing blinds help to maintain the right level of natural light and constant temperature throughout the year.

### **Energy saving**

Managing solar energy means reducing energy costs, hence significantly cutting heating, cooling and artificial lighting costs, contributing towards your wellbeing and protecting the environment alike.

### **No cleaning or maintenance**

Unlike the case with conventional blinds, do away with the annoying cleaning and maintenance. The insulation of the insulated glazing blind offers full protection from dirt, dust and atmospheric agents for a durable service life.

### **Aesthetic appeal**

Why bother with beautiful doors or windows if you can't show them off hidden as they are by cumbersome conventional blinds? The minimal design of this shading solution perfectly fits into the door or window, enhancing beauty in the most modern and most traditional contexts alike.

### **Total blackout**

The right atmosphere for your rest time. When fully lowered, the ScreenLine blackout plissé blinds fully darken the room creating the atmosphere for your well-deserved supreme quality day and night-time sleep. Besides its effective shading properties, ScreenLine is your perfect solution to avoid installing shutters and roller shutters, as well as the entailed maintenance.

### **Privacy and visual contact**

The insulated glazing protects the venetian blind, hence enabling to use ultra-thin slats, thus reducing the visual impact of the blind to the minimum, enhancing outward view to the utmost while keeping the interior from prying eyes.

### **Protection against impacts**

Kids playing in the living room? Clumsy guests? Dogs or cats roaming all over the house? Take it easy! These blinds are insulated and protected by two glass panes, protecting them against any impact, leaving the blind of your home perfectly functional and aesthetically intact.

### **Manual or motor-driven**

Renovating or building from scratch? Go for the motor-driven blinds and control them (raising and directing them) using wall-mounted buttons, remote control or app. Instead, if you just need to replace your doors or windows, we have a wide range of manual options for you. Plus, with our battery-powered system, you may install motor-driven blinds without touching the electrical system!

# Blue

Blue is the colour of the clear sky and the deep sea. It is located between violet and green on the optical spectrum.

Surveys in the U.S. and Europe show that blue is the colour most commonly associated with harmony, faithfulness, confidence, distance, infinity, the imagination, cold, and sometimes with sadness. In U.S. and European public opinion polls it is overwhelmingly the most popular colour, chosen by almost half of both men and women as their favourite colour.

INNER SIDE) AND VENETIAN BLIND (OUTER SIDE)

## Benefits of natural light

Depending on the degree of orientation of the venetian blind, our ScreenLine systems enable to uniformly distribute the natural light coming from the external. Therefore, besides shading from direct glare, our venetian blinds guide the natural light to effectively illuminate interior environments making the most of their properties and benefits. So, the light radiation is directed towards the ceiling turning it into a true chandelier of natural light (due to the “light-shelf” effect) spreading light uniformly, enhancing living comfort and reducing use of artificial lighting.

### **Greater wellbeing**

If well distributed and managed, natural light creates a more relaxed environment, strains the eyes less, stimulates the circadian rhythm, boosts positivity and productivity.

### **Away with artificial light**

Make the most of natural light for interior lighting reducing use of artificial lighting to the minimum.

### **Greater value to property**

Being awarded a higher energy efficiency and living comfort certification score, buildings capable of managing natural light have the upper hand over high energy consumption buildings.

### **Healthier environments**

Insulation in the insulated glazing shields the blind from accumulation of dust and dirt.

Given the microbial treatment on the control devices, it offers excellent hygiene over time, while the insertion of the shading solution in the glass protects those prone to allergies from mites and dust .
